

## FERNANDES SUSTAINER fine adjustments

**T** type A

**T** type B

**Use a fine flat head screwdriver to adjust these pots**

**FGC-Output control for the neck pickup (driver). Set it to match the output of the middle or bridge pickup.**

**VBC- (vibration control) Turn clockwise to increase the sustainers attack, this will also shorten battery life.**

**AGC- Sustainer gain control. Set to 10 if possible, if you get feedback turn it counterclockwise until the feedback stops.**

**MBC-Balance control- usually set to 0. Balances the output between the standard and the harmonic mode.**
